ALUM WASH

Primary Use: Parts Washing Detergent

Product Description

Alum Wash is a powder detergent for use with Parts-washing cabinets. Designed especially with soft metals like zinc and aluminum in mind. Greasy parts come clean enough for follow-on processes like painting. Compounded to be unaffected by hard water. Contains corrosion inhibitors to prevent corrosion.

Directions for Use: In cabinet type parts washers, time between solution changes will vary with the amount of oil and soil on the parts. Rinse with clear water. Rinse aids are generally not required. Use table below for reference.

Model	Tank Size	Detergents in Pounds		
	Gals	Mild	Medium	Strong
PW-30	27	3.5	5.3	7
PW-100	40	5	7.5	10
